B.Tech CSE (2026) student with practical experience in full-stack development and internship at Orangebits Digital Solutions. Built a real-world e-commerce project (GoCart) using React.js, Node.js, and PostgreSQL. Interested in building scalable web applications and starting a career as a software developer.

EDUCATION

Maharashtra State Board of Secondary and Higher Secondary Education (SSC) 2020

- Score – 71%

Maharashtra State Board of Secondary and Higher Secondary Education 2022

- Score – 68%

B.Tech in Computer Science and Engineering

- S. B. Jain Institute of Technology, Management and Research Nov 2022 – Jun 2026
- GPA: 6.8 / 10 (Till 7th sem)

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, SQL
- **Frontend:** React.js, Next.js (SSR, App Router), Tailwind CSS
- **Backend:** Node.js, Express.js, RESTful APIs, JWT Authentication
- **Databases:** PostgreSQL, Supabase
- **Additional:** WebSockets, LLM Integration (Gemini API), Microservices
- **Tools:** Git, GitHub, Postman, VS Code
- **Familiar with:** Python (FastAPI), Firebase, Flutter

WORK EXPERIENCE

Orangebits Digital Solutions Private Ltd | Project Trainee Dec 2025 – March 2026

❖ Full stack Project (GoCart):

- Worked on a full-stack e-commerce system (GoCart) using Node.js and Express.js, supporting both web and mobile applications.
- Integrated a Flutter mobile app with REST APIs for seamless backend connectivity.
- Designed PostgreSQL schemas and optimized SQL queries for efficient data handling.
- Implemented AI features using LLMs and built a basic recommendation system for personalized user experience.

PROJECTS

❖ GoCart – AI-Powered E-Commerce Platform:

- Built a full-stack e-commerce web application using Next.js, React.js, TypeScript, and Tailwind CSS.
- Developed RESTful APIs with Node.js and Express.js for authentication, product, and cart management.
- Designed and managed PostgreSQL database for efficient data storage and retrieval.
- Integrated a Python (FastAPI) microservice with Gemini API for AI-based product search.
- Implemented a recommendation system using KNN to provide personalized suggestions.
- Built a responsive and user-friendly UI with optimized performance for smooth user experience.

❖ Smart Irrigation System (AI & IoT Based)

- Built an IoT-based irrigation system using ESP32 and soil moisture sensors with real-time data synced to Supabase.
- Developed a web dashboard to monitor data and control irrigation in auto/manual modes.
- Implemented a Python-based decision system using sensor data and weather inputs to automate watering
